EXECUTIVE AI BRIEFING / GOVERNANCE

WHO IS ACCOUNTABLE FOR THE AI YOU CANNOT SEE?

Nine governance gaps. Three executive obligations.

THE MANAGEMENT TEST

Can we explain who uses AI, who permits it and how we would stop it?

01 DISCOVER THE USE

Make AI use visible and its data routes accountable.

01 Unapproved AI use

Offer useful approved tools; define data rules, SSO and upload controls.

02 Missing AI inventory

Register each workflow, owner, model, data, purpose and risk.

03 Vendor data exposure

Check retention, training terms, subprocessors and contracts.

02 AUTHORISE THE WORK

Give only the authority the business can justify.

04 Unclear business owner

Name an accountable owner with exception and stop rights.

05 No risk gate

Test accuracy, fairness, privacy, security and potential harm.

06 Missing human review

Give reviewers genuine power to challenge, reverse and offer recourse.

03 PROVE IN USE

Keep the evidence and the ability to respond.

07 Missing traceability

Protect records of key inputs, outputs, versions and approvals.

08 Silent drift

Monitor quality and re-test after material changes.

09 No incident readiness

Prepare pause, rollback, escalation and recovery drills.

LIVE AI CONTROL RECORD

Purpose • Owner • Data • Authority • Risk • Proof • Stop right

THE EXECUTIVE DECISION

CONTINUE | **RESTRICT** | **REPAIR** | **STOP**

Continue only where controls work; otherwise restrict, repair or stop.
